KEY FEATURES

- Light curtains
- Photocells
- Laser scanners
- Emergency stops
- Electromechanical switches
- Guard-lock safety door switches
- Magnetic switches
- RFID switches
- Inductive sensors
- Safety mats and edges
- Two-hands controls
- Hand grip switches
- Safety switch with guard locking
- Encoders and proximities for safety speed control

Up to

ADVANTAGES

Compared to "traditional" electromechanical safety-relays-based safety circuitries, Mosaic has many remarkable advantages, including:

- Reducing the number of devices and wiring used and, therefore, the overall size of the project
- Speeding-up control panel construction
- Providing logic configuration via a quick and easy-to-use software. Machine designers are always able to change configuration logic
- Simply adding or removing safety function blocks at any stage of machine design
- Is able to check the logic configuration of the application during the designing phase through the validation function and Simulation as well as to test it during the installation through the monitor function
- Allows tamper-proof system configurations as:
 - detection of tempering attempts through specific tests (i.e. mandatory test of the safety device at machine start-up)
 - protection against unauthorized changes to the project through a 2-level password
- All logic is configured through a **graphic interface**. No more laborious wiring is needed as with traditional solutions
- A lower number of electromechanical components also means a better Performance Level and, therefore, a higher Safety Level
- The project report provides the actual values of PFH_d, DC_{avg} and MTTF_d according to EN 13849-1 and EN 62061
- Master units M1 and M1S configurable via the MSD (Mosaic Safety Designer) graphic interface (provided with each Master units at no extra cost)

Connect up to 14 expansions...

M1

STANDARD MASTER UNIT

Master unit, also usable as a stand-alone device, able to control any other expansion unit. With 8 digital inputs and 2 pairs OSSD safety outputs.

APPLICATION EXAMPLE

Standalone: To provide protection for a smaller machinery connecting for example 1 safety light curtain, 1 e-stop, 1 magnetic sensor and 1 two-hand switch.

As Master unit: To control a more complex system providing protection for bigger machineries.

TECHNICAL FEATURES

Digital inputs	8 digital inputs
Safety outputs	2 pairs OSSD - PNP 400 mA output current
EDM	2 inputs for Start/Restart interlock and external device monitoring (EDM)
Status outputs	2 programmable digital signal outputs PNP 100 mA output current
Test outputs	4 test outputs for sensor monitoring
LED signalling	Input/output status and fault diagnostics
Configuration	With PC via USB interface using MSD (Mosaic Safety Designer) software
MSC bus connection	With MSC connector (optional)
MCM	Mosaic Configuration Memory (optional)

ACCESSORIES

MSC Rear Bus connector: necessary to connect the Master unit to any expansion module. As the Master unit can be used as standalone, the bus connector must be ordered separately.

MCM Card (Mosaic Configuration Memory): memory card designed to store the Master unit configuration as a backup. Can be used to restore the saved configuration onto a new Master unit or to duplicate the current configuration to other Master units.

Code	Description
1100000	M1 Master unit - Screw terminal blocks
1100002	M1C Master unit - Clamp terminal blocks

Certifications

ENHANCED MASTER UNIT

Master unit, also usable as a stand-alone device, able to control any other expansion unit. With 8 digital inputs, 4 single (or 2 pair) OSSD safety outputs.

APPLICATION EXAMPLE

The enhanced version of the master unit allows to control complex system and machinery that require a greater number of safety outputs, status outputs and logical operators

TECHNICAL FEATURES

Digital inputs	8 digital inputs
Safety outputs	4 single OSSD (or 2 pairs) - PNP 400 mA output current
EDM	4 inputs for Start/Restart interlock and external device monitoring (EDM)
Status outputs	4 programmable digital signal outputs PNP 100 mA output current
Test outputs	4 test outputs for sensor monitoring
LED signalling	Input/output status and fault diagnostics
Configuration	With PC via USB interface using MSD (Mosaic Safety Designer) software
MSC bus connection	With MSC connector (optional)
МСМ	Mosaic Configuration Memory (optional)

ACCESSORIES

MSC Rear Bus connector: necessary to connect the Master unit to any expansion module. As the Master unit can be used as standalone, the bus connector must be ordered separately.

MCM Card (Mosaic Configuration Memory): memory card designed to store the Master unit configuration as a backup. Can be used to restore the saved configuration onto a new Master unit or to duplicate the current configuration to other Master units.

Code	Description
1100003	M1S Master unit - Screw terminal blocks
1100004	M1SC Master unit - Clamp terminal blocks
1100060	MCM - Memory card
1100061	MSC - Mosaic Safety Comunication connector
1100099	MSC-C - Mosaic Safety Comunication connector with terminal end cap
1100062	USB configuration cable (A–mini B, length 1,8 m)
1100079	CPM - Polarizing keys for Mosaic connectors

MI8O2 - MI8O4 new

INPUT/OUTPUT EXPANSION UNITS

Input/output expansion unit. With 8 digital inputs and 2 (MI8O2) or 4 (MI8O4) OSSD safety outputs. MI8O4 allows to configure the safety output as single channel.

APPLICATION EXAMPLE

To provide more inputs and outputs for a smaller machinery connecting for example extra safety sensors and/or e-stops buttons and to control 2 extra actuators.

DIGITAL INPUTS

8

SAFETY OUTPUTS 2 pairs OSSD (MI8O2) 4 single (or 2 pairs) OSSD (MI8O4)

MI8 - MI16

INPUT EXPANSION UNITS

Input expansion units with 8 (MI8) or 16 (MI16) digital inputs increase the number of inputs of an Master unit.

APPLICATION EXAMPLE

To provide more inputs for a smaller machinery connecting for example extra safety sensors and/or e-stops buttons.

DIGITAL INPUTS 8 (MI8) 16 (MI16)

4

TECHNICAL FEATURES

Digital inputs	8 digital inputs
Test outputs	4 test outputs for sensor monitoring
LED signalling	Input/output status and fault diagnostics
Connection to Master Unit	Via MSC connector (included)

Code	Description
1100020	MI8 Expansion unit - Screw terminal blocks
1100120	MI8C Expansion unit - Clamp terminal blocks
1100021	MI16 Expansion unit - Screw terminal blocks
1100121	MI16C Expansion unit - Clamp terminal blocks
1100079	CPM - Polarizing keys for Mosaic connectors

MI12T8

INPUT EXPANSION UNIT

Input expansion unit for safety mats and edges. With 12 digital inputs and 8 test outputs for sensor monitoring.

APPLICATION EXAMPLE

With 8 test outputs can manage up to 4 independent safety mats or edges. Test output signals are used to monitor overloads and short circuits on input lines.

DIGITAL INPUTS

TEST OUTPUTS 8

TECHNICAL FEATURES

Digital inputs	12 digital inputs
Test outputs	8 test outputs for sensor monitoring
LED signalling	Input/output status and fault diagnostics
Connection to Master Unit	Via MSC connector (included)

MO4L HC S8

HIGH CURRENT OUTPUT EXPANSION UNIT

Output expansion unit with 2 pairs OSSD or 4 single OSSD high current safety outputs (PNP 2,0 A per channel, 8 A in total), 4 relative inputs for external feedback contacts (EDM) and 8 status output.

APPLICATION EXAMPLE

To provide 2 different high current output configurations (configurable with MSD configuration software)

- 4 single OSSD (1 safety output per channel with 4 feedback inputs)
- 2 pairs OSSD (2 safety output per channel with 2 feedback inputs)

SAFETY OUTPUTS 4 single OSSD (or 2 pairs)

EDM/RESTART

4

STATUS OUTPUTS

8

TECHNICAL FEATURES

Safety outputs	4 single OSSD (or 2 pairs) Solid state safety outputs PNP 2 A output current active high
EDM	4 inputs for Start/Restart interlock and external device monitoring (EDM)
Output current	2A max per channel (total current 8A)
Status outputs	PNP 100 mA output current
LED signalling	Output status and fault diagnostics
Connection to Master Unit	Via MSC connector (included)

PART NUMBERS

Code	Description
1100032	MO4LHCS8 Expansion unit - Screw terminal blocks
1100132	MO4LHCS8C Expansion unit - Clamp terminal blocks
1100079	CPM - Polarizing keys for Mosaic connectors

MR2 - MR4

SAFETY RELAY UNITS

Output expansion units provide 2 (MR2) or 4 (MR4) safety relays outputs with guided contacts connectable to 2 or 4 independent OSSD pairs. These units can also be used separately from the Mosaic system.

APPLICATION EXAMPLE

To provide 2 or 4 guided contact safety relay in applications where there is the need to cut the actuators power supply. Each NO contact is interrupted twice by the integrated safety relays.

SAFETY RELAY 2 (MR2) 4 (MR4)

TECHNICAL FEATURES

Safety relays	MR2 - 2 safety relays with 6 A 250 VAC guided contacts: 2 NO + 1 NC for EDM feedback
	MR4 - 4 safety relays with 6 A 250 VAC guided contacts: 4 NO + 2 NC for EDM feedback
LED signalling	OSSD output status (input in MRx)
Connection to Master Unit	The MR2 and MR4 expansion units do not require MSC as they are wired directly to the selected OSSD

Code	Description
1100040	MR2 Expansion unit - Screw terminal blocks
1100140	MR2C Expansion unit - Clamp terminal blocks
1100041	MR4 Expansion unit - Screw terminal blocks
1100141	MR4C Expansion unit - Clamp terminal blocks
1100079	CPM - Polarizing keys for Mosaic connectors

MOR4

SAFETY RELAY WITH CONFIGURABLE OUTPUTS UNITS

Output expansion units provide 4 configurable safety relays with guided contacts.

APPLICATION EXAMPLE

To provide 4 configurable guided contact safety relay. It allows to select the safety category via MSD:

- Safety Cat. 1: 4 independent single channel outputs
- Safety Cat. 2: 4 independent single channel outputs with OTE (Output Test Equipment)
- Safety Cat. 4: 2 independent double channels outputs

SAFETY RELAY

4

EDM/RESTART

4

TECHNICAL FEATURES

Safety relays	4 safety relays with 6 A 250 VAC guided contacts
EDM	4 inputs for Start/Restart interlock and external device monitoring (EDM)
LED signalling	Output status and fault diagnostics
Connection to Master Unit	Via MSC connector (included). Do not use Master OSSDs to drive relays

PART NUMBERS

Code	Description
1100042	MOR4 Expansion unit - Screw terminal blocks
1100142	MOR4C Expansion unit - Clamp terminal blocks
1100079	CPM - Polarizing keys for Mosaic connectors

MOR4S8

SAFETY RELAY WITH CONFIGURABLE OUTPUTS UNITS AND 8 SIGNAL OUTPUTS

Output expansion units provide 4 configurable safety relays with guided contacts.

APPLICATION EXAMPLE

To provide 4 configurable guided contact safety relay. It allows to select the safety category via MSD:

- Safety Cat. 1: 4 independent single channel outputs
- Safety Cat. 2: 4 independent single channel outputs with OTE (Output Test Equipment)
- Safety Cat. 4: 2 independent double channels outputs

SAFETY RELAY

4

4

STATUS OUTPUTS

8

TECHNICAL FEATURES

Safety relays	4 safety relays with 6 A 250 VAC guided contacts
EDM	4 inputs for Start/Restart interlock and external device monitoring (EDM)
LED signalling	Output status and fault diagnostics
Connection to	Via MSC connector (included). Do not use

Code	Description
1100043	MOR4S8 Expansion unit - Screw terminal blocks
1100143	MOR4S8C Expansion unit - Clamp terminal blocks
1100079	CPM - Polarizing keys for Mosaic connectors

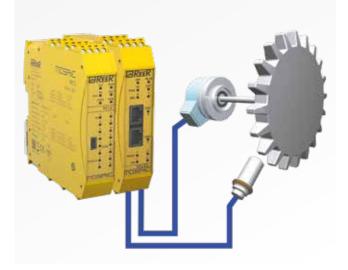

INPUT MV0 2 Proximities	INPUT MV1 1 Encoder 1 or 2 Proximities	INPUT MV2 1 or 2 Encoders 1 or 2 Proximities
AXIS MV0	AXIS MV1	AXIS MV2

RJ-45 (1 for MV1, 2 for MV2) connectors for encoders and terminal blocks for proximity switches.

Max. input frequency for encoders: up to 500 KHz (300 KHz for HTL encoder).

Max. input frequency for proximity switches: up to 5 KHz.

The MV2 module includes two configurable logical outputs and is therefore able to control up to two independent axis (configuration via MSD).

MV0 - MV1 - MV2

SAFETY SPEED MONITORING UNITS

Safety speed monitoring (up to PL e) for: zero speed control, max. speed, speed range and direction control.

APPLICATION EXAMPLE

Any application requiring speed monitoring for a hazardous tool. See relevant application example on page 39. Maintenance speed control in rail dependent storage and retrieval equipment applications.

TECHNICAL FEATURES

Digital inputs	MV0 - Input for 2 PNP/NPN proximity switches MV1 - Input for 1 incremental encoder (TTL, HTL or SIN/COS) and 1 or 2 PNP/NPN proximity switches MV2 - Input for 1 or 2 incremental encoder (TTL, HTL o SIN/COS) and 1 or 2 PNP/NPN proximity switches
Speed thresholds	Up to 8 logically selectable speed thresholds (freely configurable via MSD) for each logical output (axis)
LED signalling	Input/output status and fault diagnostics
Connection to Master Unit	Via MSC connector (included)

ACCESSORIES

SAFECODER - Safety Sin/Cos incremental encoder. See page15

MVSC - Speed monitoring sniffer cable. See page 20

Code	Description
1100077	MV0 - Proximities switch expansion module
1100070	MV1T - 1 TTL incremental encoder + 1 or 2 PNP/NPN proximity switches expansion module
1100086	MV1TB - 1 TTL incremental encoder (24 VDC) + 1 or 2 PNP/NPN proximity switches expansion module
1100071	MV1H - 1 HTL incremental encoder + 1 or 2 PNP/NPN proximity switches expansion module
1100072	MV1S - 1 SIN/COS incremental encoder + 1 or 2 PNP/NPN proximity switches expansion module
1100073	MV2T - 1 or 2 TTL incremental encoders + 1 or 2 PNP/NPN proximity switches expansion module
1100087	MV2TB - 1 or 2 TTL incremental encoders (24 VDC) + 1 or 2 PNP/NPN proximity switches expansion module
1100074	MV2H - 1 or 2 HTL incremental encoders + 1 or 2 PNP/NPN proximity switches expansion module
1100076	MV2S - 1 or 2 SIN/COS incremental encoders + 1 or 2 PNP/NPN proximity switches expansion module
1100079	CPM - Polarizing keys for Mosaic controller connectors

MCT1 - MCT2

REMOTE INTERFACE UNITS

Interface module allowing the connection of remote expansions units via the MSC bus.

APPLICATION EXAMPLE

Ideal solution for the interconnection of the safety functions of more machineries on a single production line. MCT1 and MCT2 are not shown in MSD configuration software as do not count as expansions.

CONNECTION INTERFACE 1 (MCT1) 2 (MCT2)

TECHNICAL FEATURES

Connection	MCT1 - 1 connection: 1 input or 1 output to be placed at the beginning or at the end of the network MCT2 - 2 connections: 1 input and 1 output
Cable	Shielded RS 485 serial interface compatible cable (4 wires + shield) via the connector block. We recommend the use of ReeR's cables for a correct operation of the system
Total distance	Up to 50 m for each connection (total distance up to 250 m). Max. 5 MCT expansions units
LED signalling	Module status and fault diagnostics
Connection to	Via MSC connector (included)

PART NUMBERS

Code	Description					
1100058	MCT1 Expansion unit					
1100057	MCT2 Expansion unit					
1100063	MCT25 - Serial cable for MSC bus transfer 25 m					
1100064	MCT50 - Serial cable for MSC bus transfer 50 m					
1100065	MCT100 - Serial cable for MSC bus transfer 100 m					

HM₁

DISPLAY UNIT

Alphanumeric display. It displays the messages programmed using the HSD software.

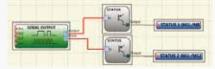

APPLICATION EXAMPLE

Used in control panels to display status messages as diagnostic or operation functions of the safety system. Can be also used to display other functioning messages of the machine or the plant.

TECHNICAL FEATURES

Display	Green display LCD 2x16				
Ports	2 configurable RS 485 serial ports USB port for messages on display programming				
Inputs	4 inputs for the connection with Mosaic: 2 synchronous serial ports (clock + data) or 4 asynchronous serial ports (data)				
	HM1 can be connected to Mosaic 3 ways:				
	Wired to a status output connected to the serial operator, asynchronous serial connection Max 32 status displayed.				
	STATUS ZONIA COLOR				
Connection to Master	Wired to 2 status outputs connected to the serial operator, synchronous serial connection				

Max 16 status displayed.

Wired to the serial MBx module via RS 485 serial port, all I/O statuses and diagnostic displayed.

Code	Description
1100090	HM1 Expansion unit
1100062	USB cable A–mini B, length 1,8 m

MBx

FIELD-BUS INTERFACE UNITS

Expansion unit for connection to the most common industrial Field-bus systems for diagnostics and data communication.

APPLICATION EXAMPLE

In all applications where it is required to communicate between the machine's safety system and the PLC control.

MBP - Profibus DP

MBD - DeviceNET

MBC - CANopen

MBEC - EtherCAT

MBEI - Ethernet IP

MBEP - PROFINET

MBU - Universal Serial Bus

MBMR - ModBus RTU

MBEM - ModBus TCP

MBCCL - CC-Link

TECHNICAL FEATURES

Ports

RS 485 serial ports for I/O Bus expansion

USB port for configuration

Connection to Master Unit

Via MSC connector (included)

MOS8 - MOS16

AUTOMATION OUTPUT EXPANSION UNITS

Non-safety

output

expansion

units.

APPLICATION EXAMPLE

Modules for automation where non-safety outputs are required. In this way the Mosaic controller can also be used as a PLC for automation.

STATUS OUTPUTS 8 (MOS8) 16 (MOS16)

TECHNICAL FEATURES

MOS8 - 8 programmable digital signal outputs -

PNP 100 mA output current

Status outputs MOS16 - 16 programmable digital signal ou-

tputs - PNP 100 mA output current

LED signalling Output status and fault diagnostics

Connection to Waster Unit Via MSC connector (included)

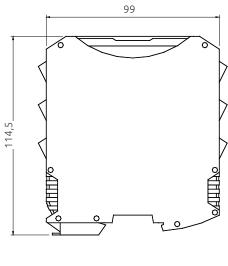

Code	Description				
1100091	MOS8 Expansion unit				
1100092	MOS16 Expansion unit				

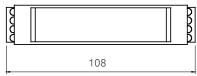

TECHNICAL FEATURES SUMMARY

COMPARISON BETWEEN SYSTEMS COMPOSED BY M1 / M1S + 14 EXPANSION MODULES

Main unit	M1	M1S	Note
Maximum number of expansion units	14	14	
USB port	yes	yes	_
MCM card slot	yes	yes	
Connection with MSC bus	yes	yes	
MSC connector provided	no	no	_
Digital inputs	128	128	
Start/Restart inputs and External Device Monitoring	16	32	_
Fieldbus input	8	32	The M1S main unit uses a new "footprint map" for data exchange with the fieldbus units
Safety outputs (OSSD)	16	32	The M1S main unit provides 4 single (or 2 pairs) OSSD safety outputs
Programmable status outputs	32	48	The status outputs of the M1S main unit can be converted to feedback inputs (up to 4 feedback inputs for the 4 single OSSD safety outputs)
Maximum number of operators managed by the MSD sosftware	64	128	
Maximum number of managed timers	32	48	
Maximum number of "Muting" operators	4	8	
Maximum number of operators "Safety Guard Lock"	4	8	
Maximum number of "Fieldbus Probe" outputs	16	32	_
Safety level	IEC	ording to IEC 61508 - 62061 rding to ISO 13849-1	

Dimensioni in mm

MECHANICAL CHARACTERISTICS

- Compact design: single module dimensions 22.5 x 99 x 114.5 mm
- Possible connection with ReeR MSC rear bus for connection with other expansion modules
- Operating temperature: -10 ... +55 °C
- Storage temperature: -20 ... +85 °C
- Protection rating: IP20 for housing, IP 2X for terminal block
- Rail fastening according to EN 50022-35 standard
- Removable terminal blocks, screw or clamp contacts
- Input/Output connectors: 24 x 22.5 mm, 6 removable terminal blocks, screw or clamp contact

Clamp contacts

Certifications

SAFECODER

Safety Sin/Cos incremental encoder, together with Mosaic, comprise a SIL 3 certified safety function for speed monitoring. Available in two models: Shaft or Hollow shaft versions.

APPLICATION EXAMPLE

Any applications requiring speed monitoring of a rotating axis. See the application example on page 34.

Features a robust and reliable interface and the ability to handle high mechanical loads.

TECHNICAL FEATURES

Shaft type	Hollow shaft version Ø 12 mm Shaft version Ø 10 mm with flat				
Fastening	Safety-Lock™ Allow high rotational speed and high shaft load capacity				
Protection rate	ousing and flange side IP67, shaft IP65 (optional 167)				
Immunity to interference	Shock and vibration resistant Insensitive to strong magnetic fields				
Resolution	2048 pulse rate				
Power supply	SC3 24D2048R - 24 VDC SC3 05D2048R - 5 VDC SC3 24B2048R - 24 VDC SC3 05B2048R - 5 VDC				
Connector	Radial M12				

CONNECTORS

M12 8-pole

- 1 GND
- 2 + V
- 3 A: Sine output
- 4 Ā: Sine output
- 5 B: Cosine output
- 6 B: Cosine output shield - PE

Orag&Drop configuration of all safety functions

User-frendly

Real-time I/O monitoring

Functional project validation

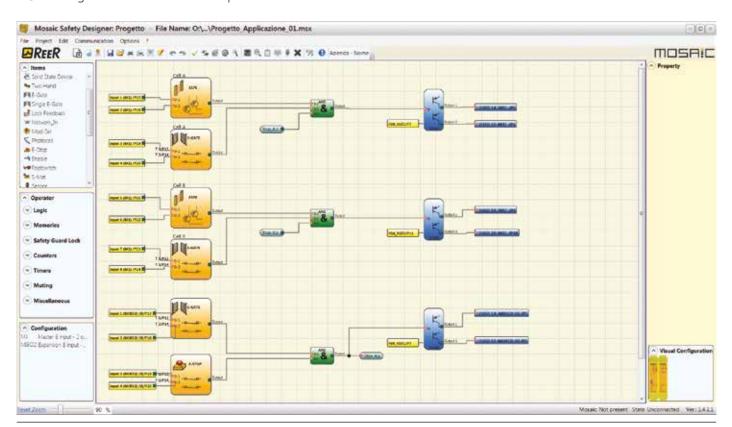

Simulation

Security password - 2-level passwords management for the prevention of unauthorised accesses and therefore of incidental modifications or tampering of the system configuration

Reports and log files - Log File with project date of creation and related checksum (CRC 4-digit hexadecimal identification) is stored in the Main unit

Project information - Project report with the following information: Project name, configuration, Safety Information (PFHd, MTTFd, DCavg, Resources used

MSD configuration software desktop.

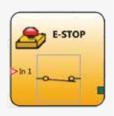

Mosaic MSD

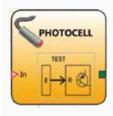

MAIN FUNCTIONAL BLOCKS

Input objects

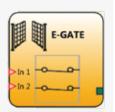

E-stop (emergency stop)

Configurable for: 1 NC or 2 NC inputs

Photocell (Type 2 safety photocell)

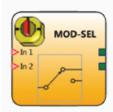

Input for photocells that need external controller. Specific output test is required

Single E-gate (safety gate device) E-gate (safety gate device)

Configurable for: 2 NC or 1 NC + 1NO inputs

More info: Property window on page 28

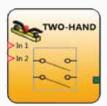

Mod-Sel (safety selector)

Configurable for: 2, 3 or 4 position selectors inputs. Specific output test is not required

Testable Safety Device (for any type of electromechanical sensors)

Configurable for: 1 NC, 1 NO, 2 NC or 1 NC + 1 NO inputs

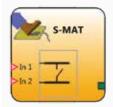

Two-Hand (bi-manual control)

Configurable for: 2 NO (EN 574 III A) or 2 NO + 2 NC (EN 574 III C) inputs

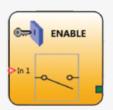

Footswitch (safety pedal)

Configurable for: 1 NC, 1 NO, 2 NC or 1 NO + 1 NC inputs

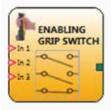

S-Mat (safety mat or safety edge)

4 wires technology. 2 inputs Specific output test is required on 2 wires

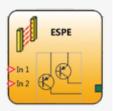

Enable (enable key)

Configurable for: 1 NO or 2 NO inputs

Enable Grip Switch

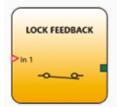

Configurable for 2 NC or 2 NO + 1 NC inputs

ESPE (optoeletronic safety light curtain / laser scanner)

Safety optoelectronics sensors with static OSSD, self-controlled output Dual channel inputs

More info: Automatic or Manual Reset on page 28

Lock Feedback

It verifies the lock status of the Guard Lock device for mobile guard or safety gate. More info: Guard Lock operator on page 31

In the case where the inputs indicate that the guard is locked the Output will be 1 (TRUE). Otherwise the output is 0 (FALSE)

Solid State Device

Generic safety sensors with static OSSD self-controlled outputs Dual channel inputs

Network_In

This input must be used in case of connection between Mosaic OSSD output and the input of another Mosaic to realize a network.

More info: Network_In on page 28

Input objects

Switch

Input for non safety switches or non safety signals. E.g.: restart button, position switch, enable signals etc.

Sensor

Input for non safety sensors or non safety signals. E.g.: Muting sensors, enable signals etc.

Fixed input

Input fixed to logic level 0 (Low) Input fixed to logic level 1 (High)

Fieldbus input

Allows to receive signals (up to 8 bits) from the machine control unit via the field-bus module. The signal is connected directly into the diagrams without using any input block. Warning: FIELDBUS inputs are not a safety signals

Speed monitoring objects

Stand Still

Check that the speed is zero or not greater than the values set

Stand Still and Speed Control

Check that the speed does not exceed the values set for both the max. speed and zero speed

Speed Control

Check that the speed is not greater than the values set

Window Speed Control

Check that the speed is not lower or higher than the values set

Output objects

OSSD (safety outputs)

PNP safety static outputs (dual channel, 400 mA). The 2 outputs cannot operate independently

Relay

The Output relay is a NO relay output. Relay outputs are closed when the input is equal to 1 (TRUE), otherwise they are open (FALSE)

Single OSSD (safety outputs)

PNP safety static outputs (single channel, 400 mA). The outputs can operate independently

Available with M1S, MI8O4 and MO4LHCS8 units.

Status (signal output)

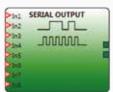

PNP static outputs (single channel, 100 mA). Can be connected to any point in the project

Fieldbus Probe Output

Allows to send signals (up to 16 bits) to the machine control unit via the field-bus module

The signal is connected directly into the diagrams without using any output block

Serial Output

It makes possible the transmission of information status to a PLC or HM1 without the need to use fieldbus modules. The Serial Output operator outputs the status of up to 8 inputs, serializing the information.

Max. number of operators: 4 - total 32 information status

The serial line can be: Synchronous (1 clock + 1 data output) Asynchronous (1 Manchester coding data output). For a tipical application sample, see HM1 on page 13

Comments and Title

Add comments to your projects and sign it with a dedicated title

Interpage operator

IInterpage

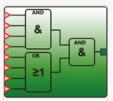

The operator Interpage is used to connect parts of the diagram without trace physically the linking. Simply assign the same link identifier operators to Interpage In and Interpage out

Operators Interpage that allow connection of parts of the diagram only by assigning a name to the connection identifier. More info: Interpage operators on page 32

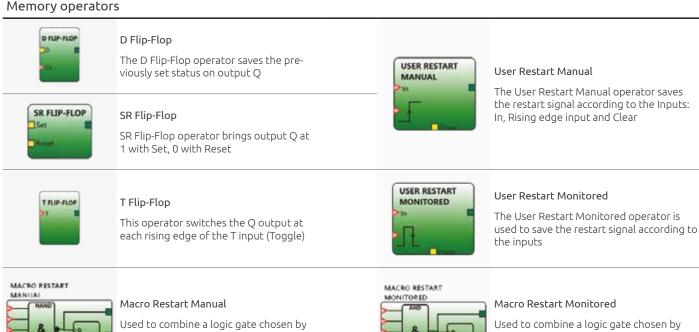

Logical operators - Up to 64 (M1) 128 (M1S) logical operator can be used

Logical Macro

Groupings can be created with a maximum of three operators of different types for a total of max. 8 inputs This allows to increase the maximum number of operators used

the user with the Restart Manual functio-

nal block User Restart Manual

the user with the Restart Manual functio-

nal block User Restart Monitored

Timer operators

Monostable

The Monostabile operator generates a level 1 (TRUE) output activated by the rising edge of the input and remains in this condition for the set time

Monostable B

This operator generates a level 1 (TRUE) output activated by the rising/falling edge of the input and remains in this condition for the set time

Passing Make Contact

In the Passing Make Contact operator the output follows the signal on the input. However, if this is 1 (TRUE) for longer than the set time, the output changes to 0 (FAL-SE). When there is an input falling edge, the timer is cleared

Clocking

This operator has up to 7 inputs to control the output Duty Cycle. Related to the selected input, this operator will generate a clock with different duty cycle. It can be used, for example, to pass or receive the status information to or from a PLC More info: Clocking operator on page 29

Delay

Delay operator applies a delay to a signal by setting the output to 1 (TRUE) after the set time, against a change in the level of the input signal

Long delay

This operator allows to apply a delay (up to 15 hours) to a signal by setting the output to 1 (TRUE) after the set time, against a change in the level of the input signal

Available with M1S

DELAY LINE

Delay line

When the signal IN is moved to 0 logic level, this operator inserts a delay to a signal carrying the output OUT to 0 after the time set. If before the end of the set time the input IN returns to 1, the output OUT still generates a pulse signal with this duration: about 2 times the response time plus the delayed time set

Long delay line

When the signal IN is moved to 0 logic level, this operator inserts a delay (up to 15 hours) to a signal carrying the output OUT to 0 after the time set. If before the end of the set time the input IN returns to 1, the output OUT still generates a pulse signal with this duration: about 2 times the response time plus the delayed time set

Differences with dealy: long delay Line operator does not filter any input interruptions less than the set time.

Available with M1S

Delay Comparator

This operator allows to compare the value of the Long delay timer with the set threshold value. The output will be kept to 0 (FALSE) until the timer value is lower than the threshold value. The output will be set to 1 (TRUE) for timer values equal to or greater than the threshold value.

Warning: the Delay Comparator operator can only be connected to an output of a Long delay operator.

Available with M1S

Pre-reset operator

65

Pre-reset

This operator allows to memorize the status of the input signal following the correct sequence of the two PreReset and Reset signals: transaction (0-1-0) of the PreReset signal followed (within the set time) by the transition (0-1-0) of the Reset

The 0-1-0 transition of the signals, to be considered valid, must take place in a time between 500 msec and 5 sec.

Available with M1S

Reset operator

Reset

This operator resets the Mosaic system in presence of errors on the inputs or outputs

This operator generates a reset of the system when the corresponding input is a double transition OFF-ON-OFF of less

More info: Reset operator on page page

Safety Guard Lock operator

GUARD LOCK Gate Lock fisk Unlock cmd Unlock Time 2.0 s

Guard Lock

The Guard lock operator controls locking/ unlocking of an electromechanical guard lock by analysing consistency between the Lock command and the status of an E-GATE and a FEEDBACK

More info: Guard Lock operator on page 31

Network operator

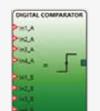

Network

Is a serial connection (Loop) of several Mosaic Master unit (with possible expansions). This operator allows stop and reset commands to be distributed in a simply Mosaic network

More info: Network operator on page 31

Digital comparator

The Digital Comparator operator allows to compare a series of input signals (from 2 to 8 max.) with a decimal constant (range 0 to 255).

The input In1 is the LSB (least significant bit) while the input In8 (or lower if the number of inputs selected is less than 8) is the MSB (most significant bit).

The comparators are: <Less; > = Greater or equal; > Greater; <= Less or equal; = Equal; ! = Different

Selecting "Signal Comparison", the Digital comparator operator will compare the first four inputs A (In1_AIn4_A) and the second four inputs B (In1_BIn4_B).

The comparators are the same as described above.

Available with M1S

Counter operators

Counter

Counter operator is a pulse counter that sets output Q to 1 (TRUE) as soon as the desired count is reached. There are 3 operating modes: Automatic, Manual, Automatic + Manual

Counter Comparator

This operator allows to compare the counter value with the set threshold value. The output will be kept at 0 (FALSE) until the counter value is lower than the threshold value. The output will be set to 1 (TRUE) for counter values equal to or greater than the threshold value.

Warning: the Counter Comparator operator can only be connected to an output of the Counter operator

Available with M1S

Muting operator objects

L Muting

With 2 Muting sensors for one-way openings (exit only)
Suitable solution for any applications of pallet exit

T Muting

With 2 Muting sensors for two-way openings (entry/exit)
Suitable solution for the most common pallet infeed/outfeed applications

T Muting "Sequential"

With 4 Muting sensors for two-way openings (entry/exit). Suitable solution for transparent material and application with presence of a pallet with reduced width or not centred with respect to the conveyor

More info: T Muting «Sequential» on page 29

T Muting "Concurrent"

With 4 Muting sensors for two-way openings (entry/exit). Suitable solution for transparent material and application with presence of a pallet with reduced width or not centred with respect to the conveyor

More info: T Muting «Concurrent» on page 30

Muting Override

Are available two selectable functional mode: Override with hold to run action Override with one pulse action

More info: Muting Override on page 30

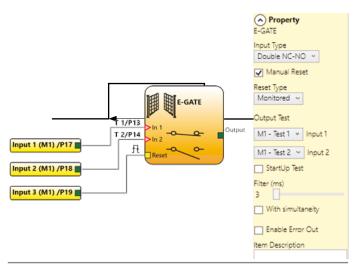

INSIGHTS

A DETAILED LOOK INTO THE MOST INTERESTING FEATURES OF MOSAIC

Property window

The property window of each function block allows configuring each block parameters in a simple and easy way.

This allows achieving an important level of customisation for each project tailoring Mosaic behaviour to each particular application.

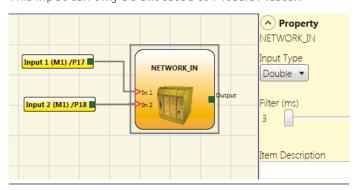

E-gate configuration example

Network In

This function block creates a network input interface connection, generating on the OUT output a logical level high (1) when the line is high, 0 otherwise.

This input can only be allocated to Mosaic Master.

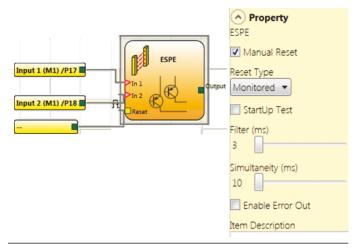

Network IN Object

They must be physically connected terminals related to an output OSSD or the first Mosaic system status to Network in inputs of the second Mosaic system.

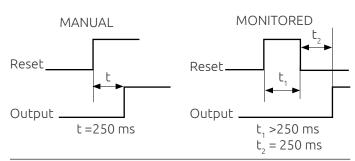

Automatic or Manual Reset

Manual Reset: if selected this enables the input request to reset each time the area protected by the safety light curtain is occupied. Otherwise (Automatic Reset), enabling of the output directly follows the input conditions.

ESPE configuration example

There are two types of reset: Manual and Monitored. When Manual is selected the system only verifies the signal's transition from 0 to 1. If Monitored is selected the double transition from 0 to 1 and then back to 0 is verified.

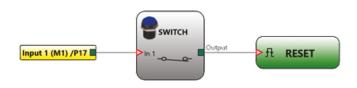

Manual and monitored reset

Reset operator

This operator resets the Mosaic system in presence of errors on the inputs or outputs.

This operator generates a reset of the system when the corresponding input is a double transition OFF-ON-OFF of less than 5s

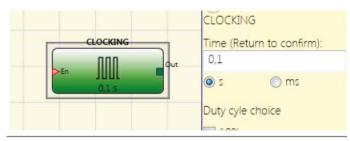

Connection of Reset operator

Clocking operator

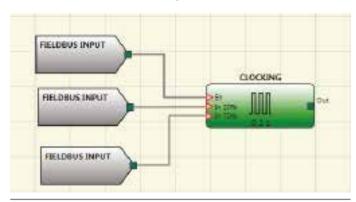

This operator has up to 7 inputs to control the output Duty Cycle.

Related to the selected input, this operator will generate a clock with different duty cycle.

Clocking operator proprerty

It can be used, for example, to pass or receive the status information to or from a PLC.

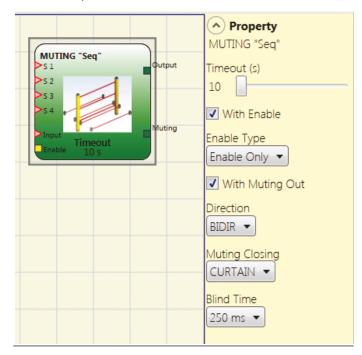

Clocking operator connection sample

T Muting «Sequential»

The activation of the Muting function occurs following sequential interruption of the sensors S1 and S2, subsequently S3 and S4 sensors (without time limit). If the pallet proceeds in the opposite direction the correct sequence is: S4, S3, S2, S1.

Preliminary condition: The Muting cycle can only start if all the sensors are 0 and the inputs are 1 (sensor and light curtain free).

Example of Sequential Muting parameters configuration

Enble only button: It is possible to enable/disable the Muting function depending on the sequence of the machine. This increase the safety.

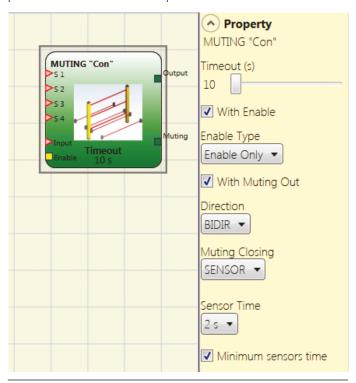

T Muting «Concurrent»

The activation of the Muting function occurs following interruption of the sensors S1 and S2 beams and then of the sensor S3 and S4: the two sensor must be interrupted within a configurable safety timeout (sensor time) the maximum duration of the Muting status is limited by a timeout.

Where t is a value that depends on the "timeout", X is the "sensor time".

Ia available the "Minimum sensors time option" that allows you to stop the Muting function if the passage in front of the sensors 1-2 and 3-4 takes place with a time less than 150 ms. In this way it is possible to detect the transit of a person much faster than a pallet.

Example of Sequential Muting parameters configuration

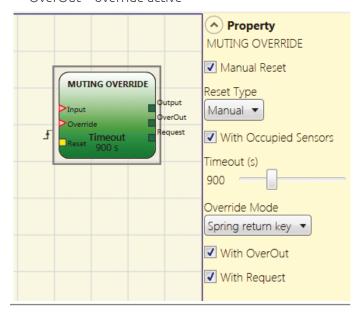

Muting closing button: It is possible to use the light curtain as sensor and anticipate the Muting closure the moment the light curtain is free instead waiting the third Muting sensor.

Muting Override

This function allows you to locally restore the safety function of the light curtain after an engaged of the light curtain not related to a normal Muting sequence.

There are also the following signalling outputs:

- Request = need to override
- OverOut = override active

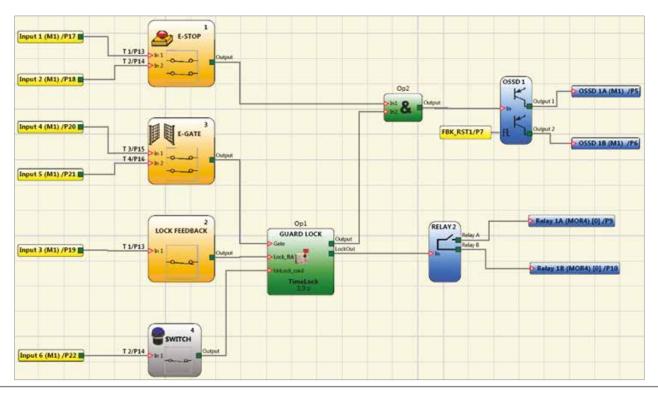

Example of Muting override configuration

Guard Lock operator

The Gate input is connected to the functional block e-gate. This is an example of Guard Lock configuration.

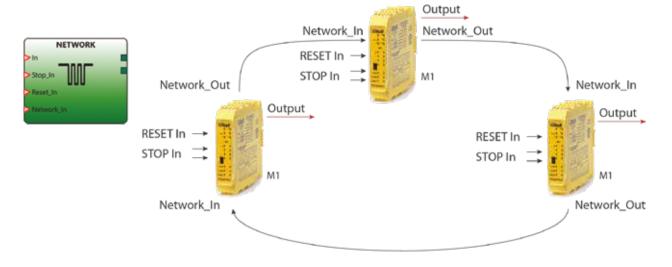

Sample of Guard Lock operator connection

- 1. The Lock_fbk input is connected to the functional block Lock_fbk (feedback from the lock)
- 2. The UnLock_cmd input (unlocks command) is connected to an input switch
- 3. The signal output will be 1 if the door is closed and the guard lock is locked
- 4. When an unlock command is applied to the input (UnLock_cmd), the output signal will be set to "0" and after a programmable time Time_Lock (2 sec. in the example) the guard lock is unlocked through the LockOut output

Network operator

It allows loop connection (Loop) of several Mosaic Master unit (with possible expansions). This operator allows stop and reset commands to be distributed in the Mosaic network.

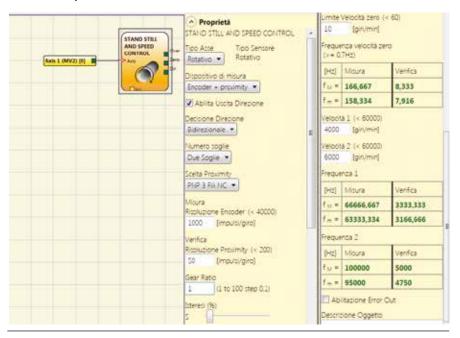

Network connection

Speed monitoring object configuration example

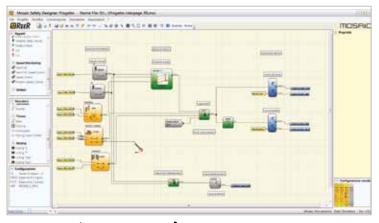

Example of speed monitoring of one axis. Monitoring of stand still and speed control with selectable 2 thresholds

Speed monitoring object configuration example

Interpage operators

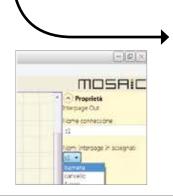

Interpage operators is a label assigning a name to a certain logical interconnection.

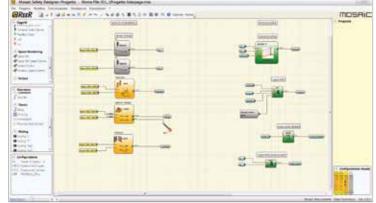

Considerable simplification and readability of the diagram.

To simplify the names assignment a drop-downmenu, that lets you choose the name of the "Interpage out" among those assigned to the operators "Interpage In"

The same diagram with Interpage function applied

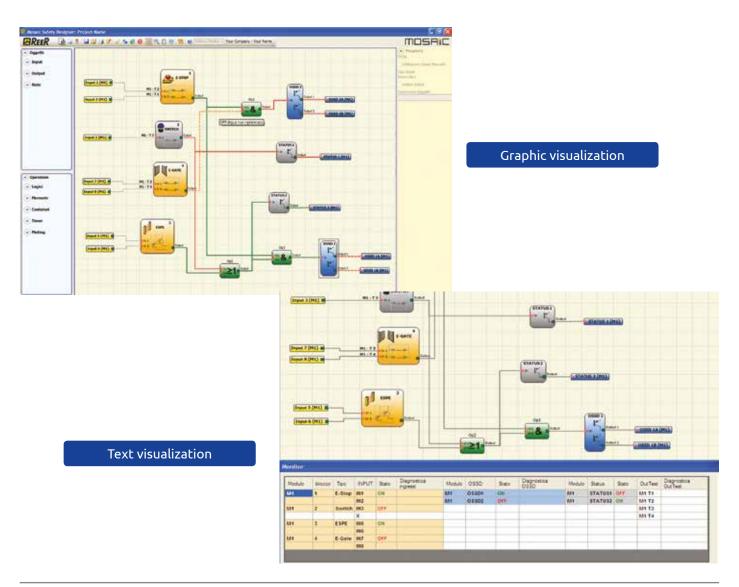

Interpage operator advantages

REAL TIME MONITOR

The I/O MONITOR allows the real-time monitoring of all the I/Os of a Mosaic system and the diagnostic information about a working system.

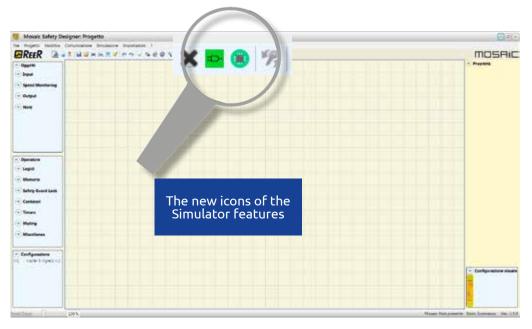

Real-time Monitor

SIMULATION FUNCTION

The Simulator allows to verify the functionality and correct operations of a project created with MSD before the assembly of the machinery.

It allows activate the inputs of the system manually or in a programmed way in order to ensure the outputs gained are correct.

Schematic simulation

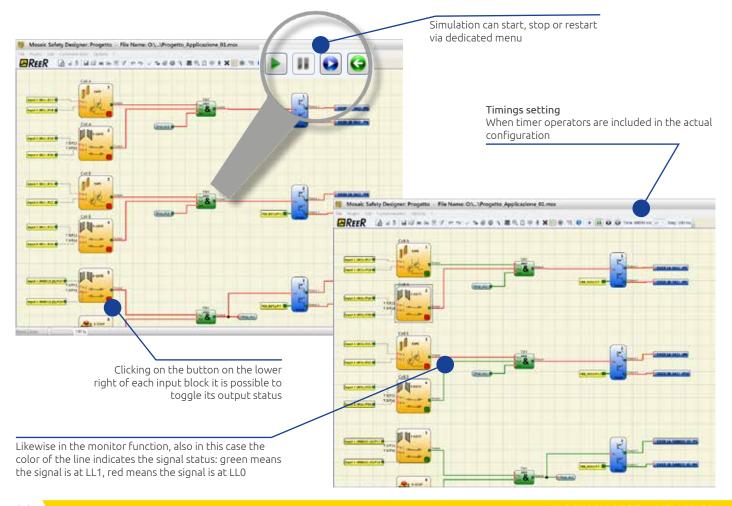

Graphic simulation

NOTE: the simulation feature is available with MSD version 1.5 and M1 firmware version 3.0 or higher.

The schematic simulation allows to "start" the project via a dedicated menu and to operate directly on any of the inputs to verify the logic of the system.

MANAGING GRAPHIC SIMULATION

The graphic simulation allows to load a number of programmed inputs status change and to verify the logic of the system as a graphical output diagram. This methodology allows to create templates replicating the exact functionality of a machinery and apply them on different projects.

Template Stimuli

Based on the schematic loaded, it creates a template file to fill with the desired values.

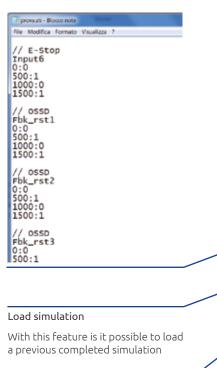

The user can modify the status of the input signals in a certain time.

Parameter Editor

The user must save the file with the required name and open it again with a text editor to modify the parameters.

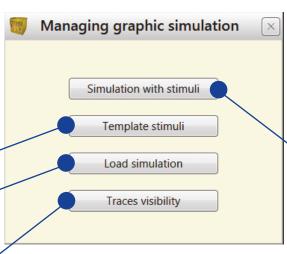

Simulation with Stimuli

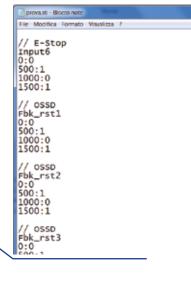

Load the template file saved and starts the simulation.

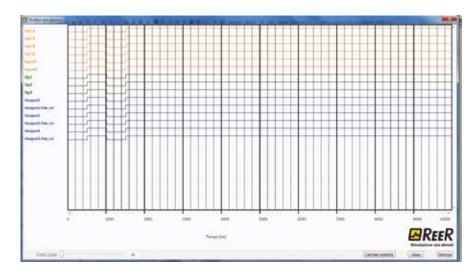

Traces visibility

With this option the user could select the traces (waveform signal) to be displayed in the graph or not

At the end of the simulation a graph with all the resulting signals is showed.

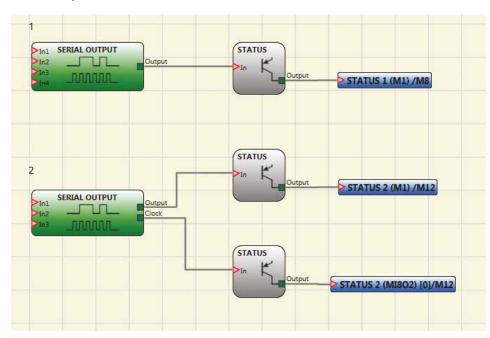

HSD SOFTWARE

MESSAGES EDITOR FOR HM1 DISPLAY

HSD is the editor software that allows programming of the device HM1

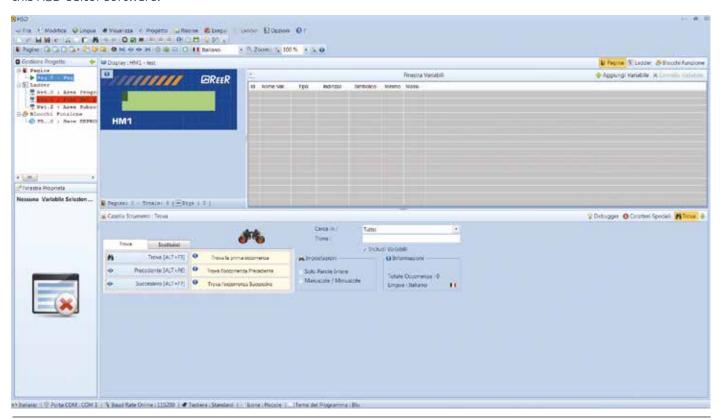

HM1 can be connected to Mosaic system in 3 ways:

- Wired to a status output connected to the serial operator, asynchronous serial connection. Max 32 status displayed. See picture 1
- Wired to 2 status outputs connected to the serial operator, synchronous serial connection. Max 16 status displayed. See picture 2
- 3. Wired to the serial MBx module via RS 485 serial port, All I/O statuses and diagnostic displayed

HM1 connections type

The digital signals from the output status or serial can be converted to display messages on the display HM1 through this HSD editor software.

HSD main screen

APPLICATION EXAMPLES

SAFETY MANAGEMENT OF A PALLETIZING SYSTEM WITH TWO ROBOTIC CELLS

The system comprises a conveyor that transports boxes to two robotic palletization cells.

The machine is completely protected by a fence with three access gates (one for each robotic cell and one for the conveyor area) equipped with a safety switch. When the gate of the robotic cell is open, the corresponding robot stops. When the conveyor area gate is open the entire plant stops.

The completed pallets are collected by a forklift truck through the access gate which is protected by a safety light curtain. The access of the forklift truck for collecting the pallet, when the robot is stopped in the rest position, by reason of the safety light curtains, prevents the robot to start.

In all other phases of processing, occupation of each light curtain causes the related robot to stop. The related manual restart control is located close to each light curtain. The system is equipped with four emergency push buttons (e-stop).

Gate switch 1

E-Stop 3

E-Stop 2

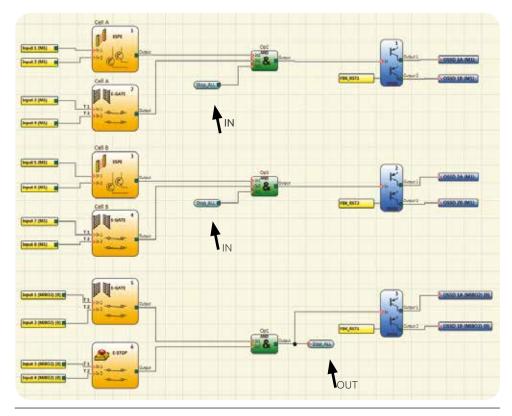

Restart 2

Restart 2

E-Stop 4

Total safety devices: 2 safety light curtains, 2 restart buttons for the safety light curtains, 3 safety gate switches, 4 emergency push buttons.

Using conventional components – safety relay modules – to build up the safety circuit, it would be necessary to use at least six safety modules, wired to each other in order to perform the required functions: 2 safety relays for the light curtains, 3 safety relays for the gate switches, 1 safety relay for the emergency stop chain.

16 inputs - 4 OSSD pairs - 8 test outputs - 4 signal outputs

Solution with Mosaic

Using Mosaic to build up the safety circuit, it is sufficient to use:

- 1 M1 or M1S Master unit
- 1 MI8O2 expansion unit

Note 1: the Reset buttons are not displaon the diagram ved because they are directly connected to the feedback of the OSSD safety outputs (inputs FBK_RST1, FBK_ RST2. The 4 E-STOP are connected in series and in the diagram they are represented with a single block.

Note 2: 3 operators Interpage (2 In and 1 Out) were included in the diagram. These allow you to link the inputs and outputs of the logic gates "&" without having to draw the line.

SAFETY MANAGEMENT OF A MACHINING CENTRE WITH ALTERNATE LOAD / UNLOAD

The operator is required to load and unload the workpiece. The machine is protected by two horizontal safety light curtains. In this case, each light curtain must be equipped with the Muting function so as to permit access to the hazardous area by personnel during the non-hazardous part of the machine cycle.

Depending on the position of the tool, which is the hazardous element, one of the two light curtains (the one facing the tool working area) is active, while the other is muted so that the operator can load/unload the workpiece.

The Muting condition of the two safety light curtains will then be inverted when the tool is required to operate on the opposite side of the machine.

load the by two use, each a Muting azardous ous part

Lety light a tool is a fe tool is a f

The machine is completely protected by a fence with an access gate equipped with a safety switch. When the gate is opened, the machine stops. The related manual restart control is located close to each safety light curtain. The system is equipped with three emergency push buttons which, if activated, stop the machine.

Total safety components: 2 safety light curtains, 2 restart buttons for the safety light curtains, 1 safety gate switch, 3 emergency push buttons.

Using conventional components – safety relay modules – to build up the safety circuit, four safety modules would be necessary: 2 safety modules for the safety light curtains with Muting function, 1 safety module for the gate switch, 1 safety module for the emergency stop.

16 inputs - 2 OSSD pairs - 8 test outputs - 2 signal outputs

Solution with Mosaic

Using Mosaic to build up the safety circuit, it is sufficient to use:

- 1 M1 or M1S Master unit
- 1 MI8 expansion unit

NOTE: the Reset buttons are not displayed on the diagram because they are directly connected to the feedback of the OSSD safety outputs (inputs FBK_RST1, FBK_RST2.

The 3 E-STOP are connected in series and are represented in the diagram with a single block.

The diagram also shows 2 status outputs used to drive the indication lights of the active Muting.

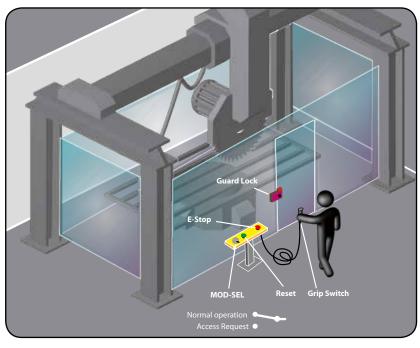

SPEED MONITORING FOR A HAZARDOUS TOOL

In this example, to place or remove tooling or to perform maintenance activity where is necessary for the operator to enter the dangerous area.

As long as the tool is working at the normal speed the GUARD LOCK is locked and the access to the hazardous area is not allowed.

Access to the hazardous area is allowed either when the working cycle is over or when the operator switches the MOD SEL to "Access Request". When the tool stops the lock is unlocked and allows the opening of the door. In this case the speed controller verifies that the tool is stopped (zero speed).

For maintenance, it is necessary that the system operates at reduced speed. The operator will have to act on the selector (MOD-SEL) and bring it in the "Maintenance" position. When the tool stops the lock is unlocked and allows the door opening. If the tool has to be kept moving for

maintenance reasons as the operator is inside the hazardous area, this is possible through the Grip Switch. The speed monitoring device detects whether the speed of the tool is under a defined threshold set through the MSD. If the threshold is exceeded or the Grip Switch is released the machine is immediately stopped.

On the perator panel are available the emergency stop (e-stop) button and reset button to restore the normal operating conditions of the safety lock after the operator intervention.

Using Mosaic to build up the safety circuit, it is sufficient to use:

- 1 M1 or M1S Master unit
- 1 MI6 expansion unit
- 1 MV0 expansion unit for safety speed monitoring

Safety speed monitoring

Comments

Using Mosaic, all the safety logic circuitry is implemented using the graphic interface and not by hard-wiring the outputs of the relay modules to each other. Correct functioning of the logic circuitry is checked during the design phase by the **validation function** and can be tested with the **simulation** and **monitor function** during installation. During the design phase, safety functions can be easily added or removed, for example adding other sensors or zones. Start up tests can be inserted in order to detect any attempt of by-passing the safety system, which is always a possibility with traditional relay modules.

TYPICAL APPLICATIONS

Pallets production machines

Wood-working machines

Painting machines for wood-working industry

Handling machines for wood-working plants

Wood-working machines squaring edgebanders

Robots

Plastic film production machines

AGVs (Automatic Guided Vehicle)

Pad printing machines

Bending machines

Palletising systems

Palletising and bottling plants

Lifts

Crate packer/unpacker and palletising systems

Beam drilling and sawing machines

Panel sizing saws

Vertical lift storage system

Rail dependent storage and retrieval equipment

Industrial boilers

Industrial thermal processes

REER Customer Service

We put our Customers always first

ReeR after sales service is committed to support all customers that need technical guidance regarding functionality, handling and installation of our products.

Customer Service Hotline +39 011 24 82 215 Monday to Friday 8.30 - 12.30 and 13.30-18.00 (CET)

or contact aftersales@reer.it

For product returns please visit www.reersafety.com for further information.

60 years of quality and innovation

Founded in Turin (Italy) in 1959, ReeR distinguished itself for its strong commitment to innovation and technology.

A steady growth throughout the years allowed ReeR to become a point of reference in the safety automation industry at a worldwide level.

The Safety Division is in fact today a world leader in the development and manufacturing of safety optoelectronic sensors and controllers.

ReeR is ISO 9001, ISO 14001 and ISO 45001 certified.
